Saint Louis University and YouGov surveyed 900 likely Missouri voters from July 27 to August 08 about current political issues, gun policy, and education policy in Missouri. The following pages present results for most survey questions. The margin of error for survey results for the full sample is 4.02%. Margins of error for questions asked to subsamples are listed below. Original data and analyses from the SLU Poll Directors are available at <https://www.slu.edu/poll>.

Funding and Support

The Saint Louis University PRiME Center provided the majority of funding for the SLU/YouGov Poll. The origins of the SLU/YouGov Poll lie in an internal Big Ideas competition to define university-wide strategic research priorities sponsored by the Saint Louis University Research Institute. The Big Ideas competition provides funding to research initiatives that demonstrate broad faculty engagement, strong leadership and compelling research plans.

About Saint Louis University

Founded in 1818, Saint Louis University is one of the nation's oldest and most prestigious Catholic institutions. Rooted in Jesuit values and its pioneering history as the first university west of the Mississippi River, SLU offers more than 13,500 students a rigorous, transformative education of the whole person. At the core of the University's diverse community of scholars is SLU's service-focused mission, which challenges and prepares students to make the world a better, more just place.

Methodology and Weighting

YouGov interviewed 1135 Missouri (MO) registered voters, with the goal of screening for and surveying Missouri likely voters. The Missouri registered voters were then matched down to a sample of 1015, yielding a target subsample of 900 likely voters including 450 from each group treatment. The respondents were matched to a sampling frame on gender, age, race, education and group treatment. The sampling frame is a politically representative “modeled frame” of US adults, based upon the American Community Survey (ACS) public use microdata file, public voter file records, the 2020 Current Population Survey (CPS) Voting and Registration supplements, the 2020 National Election Pool (NEP) exit poll, and the 2020 CES surveys, including demographics and 2020 presidential vote.

The sample of all starts was matched from 1015 respondents to 900 completes, yielding a target subsample of 900 MO likely voters. The respondents were matched to a sampling frame on gender, age, race, and education. The sampling frame is a politically representative ”modeled frame” of US adults, which was then subsetting to only include MO likely voters. It is based upon the American Community Survey (ACS) public use microdata file, public voter file records, the 2020 Current Population Survey (CPS) Voting and Registration supplements, the 2020 National Election Pool (NEP) exit poll, and the 2020 CES surveys, including demographics and 2020 presidential vote.

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, and 2020 presidential vote. The propensity scores were grouped into deciles of the estimated propensity score in the frame and poststratified according to these deciles.

The weights were then post-stratified on 2020 presidential vote choice as well as a four-way stratification of gender, age (4-categories), race (3-categories), and education (4-categories). The weighted dataset of registered MO voters was then subsetting on likely MO voters, and the weights were trimmed and recentered around 1, to produce the final weights for likely Missouri voters.
